MINING NEWS ORE STRIKE MADE IN RECORD TIME

Commonwealth Extension
Becomes Producer Month
After Organization.

Bisbee, Ariz., June 18.—The Commonwealth Extension Mining company, recently organized by Bisbee capital, has struck ore. The finding of ore is one of the quickest on record, it being encountered in paying amounts just 31 days after the first spadeful of earth was taken out. The ore body was encountered at the 150-foot level, and the body that is being worked by the Commonwealth mine, 150 feet from the Extension line. The shaft would have been down sooner had it not been that a delay was caused while waiting for necessary parts, but as it is an average of seven feet per day has been made. All the way down to the present level where ore was encountered the management had encouragement from stringers that came into the shaft and determined the continuance of the highly mineralized conditions recognized on the old Commonwealth property. At 150 feet there came into the shaft a seam of ore that looked more like the real thing than anything previously encountered. It kept getting better until, at the 250 level, it entirely filled the north side of one compartment of the shaft.

It has now been determined that the ore is identical with that encountered by the old Commonwealth at practically the same depth and in which it is still working at the 400-foot level. This working is about 150 feet across the line of the extension. The Commonwealth ore in the incline above indicates dips to the south and better in the extension. The shaft, direct towards the Extension shaft.

Steam Shovel Mining.
Steam shovel mining is drawing more and more attention in the district. The Sacramento mill continues to show ore in both smelting and concentrating grade close to the surface which indicates that in due time it will be found feasible to steam shovel that great deposit. Other large bodies of ore have been located close to the surface and the chances with which the steam shovel method of production can be carried on are sure to be a factor in the future of the Warren district in a short time.

Will Be Taken Over.
Calumet and Arizona acquisition in the Ajo have yet to be formally accepted upon. General manager John C. Greenwood and Chester A. Condon, of the

directorate of the company, have been out in the Ajo all week and it is generally understood that their inspection has moved the taxable reports made on the property. There is considered to be no doubt but that the Calumet and Arizona smelter at Douglas, but announcement may not be made until the expiration of the option period, Oct. 1. The Ajo ore body is substantially the same as the one at the Extension line. The shaft would have been down sooner had it not been that a delay was caused while waiting for necessary parts, but as it is an average of seven feet per day has been made. All the way down to the present level where ore was encountered the management had encouragement from stringers that came into the shaft and determined the continuance of the highly mineralized conditions recognized on the old Commonwealth property. At 150 feet there came into the shaft a seam of ore that looked more like the real thing than anything previously encountered. It kept getting better until, at the 250 level, it entirely filled the north side of one compartment of the shaft.

To Work on Every Level.
Shattuck-Arizona will be working on its every level before the end of the month. They are now in the 200, with new development driving toward locations of the 300, 400 and 500 feet level and will soon be taken preparatory to development work. The 2, 3, 4, 5, 6, 7 and 8 and 900 foot levels will be brought under active development. Each of these levels has already made good showing and their working is expected to result in excellent ore finds and increased shipments. The directors' meeting of the company, at which dividend action will be taken up will be held on the 20th of this month. In the matter of lead-silver shipments the company is now awaiting the formation of a new contract with the El Paso smelter. The new contract will give better terms than heretofore and it is expected that around 100 tons per day will be shipped. This will return an average of \$12 net, or something like \$145,000 per year, which, as the Shattuck is essentially a copper producer, is regarded as pure "red-lead." Besides this the ore shipments to the Calumet and Arizona smelter at Douglas will gradually be increased until in a few months, they will average 300 tons a day.

Improved Methods Shown.
Nowhere is the improved methods in smelting shown more clearly than in the work now being carried on by the Copper Queen at the old slag dump. Here hundreds of tons of what, a few years ago, was considered waste slag, was dumped. This slag was tested and found to run 12 percent and better in copper and the slag has been busy shipping it to the smelter. The slag works at the Calumet and Arizona smelter, as it is accurately mapped out and all being open working and nothing but slag and stone is produced, the work can be carried on at a rapid rate.

General Auditor Paul. of the Calumet and Arizona and Cole-Ryan holdings, was a business visitor. C. S. Schultz, superintendent of the Palmar mines near Nacozari, is a visitor here.

To Withstand the Depressing Effect of the Heat.
GROVE'S TASTILESS chili TONIC enriches the blood and builds up the whole system and it will wonderfully strengthen and fortify you to withstand the depressing effect of the hot summer. 50c.—Advertisement.

MINING NEWS RIVERSON HAS NEW EL PASO OR LEASE

Already Has Uncovered Rich
Ore: High Graders Make
a Rich Strike.

Douglas, Ariz., June 18.—W. L. Riverison has secured another year's extension on his lease of the El Tigre mine, 15 miles east of El Tigre, the date of its expiration under the new lease being June 1, 1915. The mine is owned by the Steindler interests of New York. Some enormously rich ore has been uncovered by Riverison's management, one body, a small one, however, carrying more than 22,000 ounces of silver in the ton, was discovered before his departure for Douglas. He has good ore on the floor of up by his miners on the 200 foot level, the lowest workings in the property. This is encouraging, as it shows continuity with depth of the ore encountered above. No assays have been made of the new ore bodies, nor had their extent been ascertained when Riverison left. He has good ore on the floor of the lower drift, however. The experimental concentrator of seven tons capacity, recently erected by Riverison, has attained such good results that he has decided to immediately enlarge it. To this end he will erect machinery to increase it to a 25 ton mill.

High Graders Make Strike.
Although high graders are usually a pest to the mine owners, they have worked well for John Wallace, a wealthy German resident of Nacozari, on his Red Top mine, five miles southwest of that camp. The property has been lying idle for some time, until recently the high graders began working it. Only small streaks of high grade were encountered for a time. Then the drift broke into four, carrying gold-copper values to the ton. This new vein has been discovered, and it is finally leaked to the ears of the owner. Wallace is now taking steps to increase the size of the mine. It is understood.

Huachuca district is the scene of active operations by the mines, Washington and the Archipelago. The former is working but a small force, doing strictly development work. The latter is developing a large vein, and is working on men almost daily. At this point also high graders are working, and some of the best ore has been discovered. The story of the mine is that the high graders are "getting" of their richest ore. A number of small streaks of high grade ore have been discovered, and these are working day and night, turning the ore into bullion. The high graders are working on a number of previously very poor Mexican mines and are making fine returns.

Romance of Hand's Mine.
The most important strike in recent months is that made by Col. Norton Hand on the El Hand property, which he is leasing from the Moctezuma Copper company. The workings on the 300 foot level have uncovered a 15 foot chute of high grade ore, carrying native and horn silver as well as fine gold values.

The romance connected with the property is through the connection of the mine with the El Hand property, which he is leasing from the Moctezuma Copper company. The workings on the 300 foot level have uncovered a 15 foot chute of high grade ore, carrying native and horn silver as well as fine gold values. The mine is working in a tunnel nearly three miles long, and the ore is being shipped to the smelter at Douglas. The mine is working in a tunnel nearly three miles long, and the ore is being shipped to the smelter at Douglas. The mine is working in a tunnel nearly three miles long, and the ore is being shipped to the smelter at Douglas.

Will Reopen Smelter.
After having his force employed for several months in carrying out the plan to keep his smelter running indefinitely, superintendent George B. Squire, of the Moctezuma mine, is preparing to reopen the 85 ton plant in the near future. The work is being carried out in the 85 ton plant in the near future. The work is being carried out in the 85 ton plant in the near future. The work is being carried out in the 85 ton plant in the near future.

CANANEA WORKING AT HALF CAPACITY

President's Report Shows
Mining Cost Slightly In-
creased During Year.

Cananea, Mexico, June 18.—The Cananea Consolidated Copper company is operating at present at a little over half capacity, four furnaces and two concentrators at the present time. Besides the reverberatory furnaces, one section of the concentrator is in operation. The annual report of president L. D. Ricketts shows that it cost the company \$2.92 a ton of ore during 1912 compared with \$2.16 the year previous. This is accounted for in the fact that low grade ore were mined during the year, and the increased development work and the fact that the general expenses were charged to operating cost. During the year there were 72,463 feet of development work done, 107 feet 192 feet were shafts, 15,283 feet were adits and the balance drifts.

Exports through the port of Agua Prieta showed a decrease of 2,800,000 pesos to have been exported during this month. This is a decrease of 60,000 pesos compared with April, when total exports were valued at 2,860,000 pesos. The decrease was partly due to the mill of the Moctezuma Copper company at Nacozari being closed for a week, on account of a strike.

To Resume Operations.
By the first of next month the Calumet and Arizona expects to be again in operation. It has been practically idle for over a month. Due to the strike in the El Paso smelter, which handles its lead concentrates. Operations will be resumed at almost normal.

To Install Concentrator.
A small concentrator is soon to be installed at the Del Pilar mine, located near Santa Cruz, about 40 miles north-west of Cananea. The property was recently sold to the Manhattan Development company by the Arnold Mining company for \$58,000. The Manhattan people are at present figuring with machinery houses for the equipment, and by fall the new mill will be in operation. Shipments of ore have been resumed to the Cananea smelter, and an average of one car a week is being maintained. The manager of the property is Dr. J. C. Underwood, while A. O. Kopper, former manager, is now superintendent. President Bishop of the Manhattan company was a visitor at the property this week and is generally pleased over conditions at the property, which is good copper proposition.

MINING NEWS STOP LOOK NOT STOP MINE WORK

With the Exception of Main
Tunnel, Inspiration Con-
solidated Is Active.

Miami, Ariz., June 18.—At the Inspiration Consolidated the idleness enforced in the main transportation tunnel by the Keystone suit has had no effect upon any other portion of the workings. The usual rate of work is being maintained in the blocking out of the Colorado ore body, which will be worked by the existing system being employed from that used by the Miami Copper. At the Live Oak section of the mine an Aldrich vertical triplex electric pump is being installed. It will have a lift of 170 feet.

Work at the mill site and on the railroad grade between the mine and the mill is proceeding rapidly and the grading for the crushers at the Main East and West shafts is almost completed.

Miami Ore Extraction Increases.
At the Miami Copper company's property the mine has been rapidly increasing the check imposed upon ore extraction by the cave of April 17, and it is expected that the normal output will again be reached in the near future. Investigation subsequent to the cave has resulted in the conclusion that the mine is not a fault, whose presence was not apparent until the surface was worked only after the capping came in.

Iron Cap Orebody Larger.
The Miami Copper company's excellent shipping record, having shipped a 35-ton carload of 70 percent ore, the ore is the earliest in the normal output level is increasing and remains as high in value as ever. About 470 feet east of the shaft the main vein is crossed by another vein at an acute angle. Forty feet beyond this cross-vein the ore in the face of the drift is turning to the north, and the cross-vein passes through the main lead at an angle of north, 38 degrees east. The ore is probably a part of a point not very far from the present face of the drift, and a greatly increased ore body has been discovered. The main lead the cross-vein has not yet been explored sufficiently to show its extent, but it is turning to the north and depth also are unknown. From present indications the Iron Cap is on the verge of the increase of considerable magnitude.

New Shaft to Be Sunk.
At the Inspiration Extension property the ground has been cleared for beginning of the shaft, and the material has been hauled to the ground, adjoining Inspiration Consolidated on the northwest, to erect a head frame. The shaft will be 100 feet deep, and the engine formerly used at the Globe Michigan property, is being installed at the Inspiration Extension. The shaft will be 100 feet deep, and the engine formerly used at the Globe Michigan property, is being installed at the Inspiration Extension.

Elaborate Tests at Hayden.
S. J. Gornly, formerly in charge of the smelter at Cerro de Pasco, is conducting an elaborate series of tests at the Hayden mine, to determine the result of the treatment of Ray Consolidated ore by the American Smelting and Refining company. The tests will be the basis of a new long term contract between the Ray Consolidated and the American Smelting and Refining company, which include fine and coarse, will cover a period of about 60 days, being half finished to date.

Superior & Boston Reprints.
At the Superior & Boston the shipments have been temporarily delayed by the imperative necessity for repairs, including work on the shaft and laying of turn-sheets, etc. The superintendent, Mr. J. H. Gornly, and the S. & B. will experience no difficulty in shipping three carloads of ore in the near future. The work is being carried out in the 85 ton plant in the near future. The work is being carried out in the 85 ton plant in the near future.

At the Arizona Commercial, the Copper Hill shaft is finished for all purposes of development. The shaft is 100 feet deep, and the engine formerly used at the Globe Michigan property, is being installed at the Inspiration Extension. The shaft will be 100 feet deep, and the engine formerly used at the Globe Michigan property, is being installed at the Inspiration Extension.

district, and the Southern Pacific railroad at Florence, has been temporarily discontinued, but will be resumed upon the arrival of trucks and the shipment of material. The property is being opened up by Gunn Thompson. It is an old time low-grade silver property containing some 100,000 tons of ore. There are several thousand tons of silver ore blocked out. Road construction at the property is almost completed, and a shaft will soon be sinking under the direction of superintendent Thomas Tische, formerly mining superintendent of the Inspiration Copper company's mine at Miami.

Alax Mine Operative.
At the Alax mine, about five miles southwest of Raymond, a force of men is working under supervision of the owners, Benedict Brothers. The property is somewhat similar in formation to the Inspiration.

Belle Springs Group Development.
The Belle Springs group, owned by Jack McKinnon, is being developed by the Calumet & Arizona property on the south and west, is showing good results in the main tunnel, now 30 feet long and approaching the ledge.

GOOD ORE SHIPPED TO DOUGLAS SMELTER.

Stranger in Ghost Tunnel Carries 280 Gold to Tom Ray Company.

Phoenix, Ariz., June 18.—Several shipments of good ore have been made from Hot Springs Junction to Douglas. The shipment of 100 tons from the Ghost claim of the Buffalo-Arizona company. Some time ago a rich stratum came into a tunnel being driven on the ghost. The stratum is now widened out to four inches of quartz carrying nearly \$50 a ton. Other shipments are to be made soon.

Reliable Expert Treatment UNIFORM FEES

People suffering from insidious, slowly but surely progressing diseases are apt to postpone seeking treatment from day to day, not realizing that the dangerous disease plants its roots deeper and deeper into the enfeebled system, robbing the body of its best forces.

They do not realize the seriousness of their condition, and try in vain to prevent the slowly advancing decay of their best powers by taking worthless nostrums, instead of seeking help where only help can be procured through

Skillful Treatment of Capable Specialists

In the six years of their stay in El Paso the INTERNATIONAL SPECIALISTS have proven in thousands of cases their ability to cope with even the most complicated cases.

Their eminently successful methods have restored health in many cases where all hope was abandoned, and their uniform success in the treatment of Chronic Diseases has secured them an enviable patronage of the best and most influential people in El Paso as well as in the southwest in general.

Among the many diseases they treat and devote particular attention to the treatment of, are Catarrh, Rupture, Scrofula, Epilepsy, Nervous Decline, Blood Poison, Varicose, Enlarged Prostate and all Kidney, Bladder and Rectal Diseases, and all Skin and Private diseases of Men and Women.

FREE BOOKS

All afflicted people should get one of their free books and not only read it but study it, they contain information of value not only to the sick but the well also. Specify number wanted.

Book No. 5, Diseases of Men.

Book No. 6, Diseases of Women.

Book No. 7, Chronic Diseases.

Book No. 8, Kidney and Rectal Diseases.

Either book will be sent to any address in plain sealed envelope upon receipt of request with four cents for postage.

Consultation, Examination, and Advice Free.

Office hours: 9 a. m. to 1 p. m., 2 p. m. to 8 p. m. Sundays, 10 to 1 only.

Tingles Blood with Warmth and Life

Anaemic, Pale, Thin, Bloodless, Tired, Weary People Feel the Breath of New Life and Vigor.

Don't Let the Wicked Imps of Bad Blood Slay You Low; S.S.S. will Save You.

The blood often needs a bracing influence. It demands help. It has lost that pulsating, invigorating effect that gives brightness to the eye, springiness to the step, activity to the stomach and digestion, and that ought to make you feel keen, alive and thrilled with the sensation of nervous and muscular energy. And you can realize all of these joyful experiences by a short use of that wonderful bracing medicine so familiar to a host of people as S.S.S. It drives out the pains and aches of rheumatism, puts life into your dull, listless nerves; awakens the sluggish brain; animates the tired, weary muscles; and arouses your blood to throw out of the system all those poisonous germs and acids that cause eczema, lupus, psoriasis, acne, pimples, boils, tetter and those scrofulous taints which keep people half sick and make their skin unsightly. Nearly all sickness is due to sluggish blood. And if you let S.S.S. bathe your system with its wonderful influence your nervous troubles, your wear, faded, listless, lifeless body will revive and become so renewed with the sense of enjoyable health you will scarcely know yourself. Try S.S.S. today. Get a bottle of any drug store. It will drive out the "blue," put you on your feet; keep you going all day and enable you to sleep soundly and restful. S.S.S. is not a "dose," not a physic, but a fine, bracing, purifying medicine that is sure to do you a world of good. It is just what you need. S.S.S. is prepared in the great laboratory of Atlanta, Ga. and if you are troubled with any stubborn blood disease their medical dept. will guide you safely to health. Write them.
